The Honorable Chairman and Members of the
Hawaii Public Utilities Commission
Kekuanaoa Building, First Floor
465 South King Street
Honolulu, HI 96813

Subject: KIUC 2012 Annual Service Reliability Report

Dear Ms. Kane:

Attached for the Commission's information is a copy of KIUC's 2012 Annual Service Reliability Report. If you have any questions regarding the attached report please contact Tim Blume at (808) 246-8274.

Very truly yours,

Michael V. Yamane, P.E.
Chief of Operations

Interruption List.....	Attachment A

INTRODUCTION

This is the 2012 Annual Service Reliability Report ("Report") of the Kaua'i Island Utility Cooperative ("KIUC"). The Report contains a five-year history of standard industry reliability indices in order to depict the quality of electrical service provided to the cooperative consumer/member. These reliability indices are calculated using the data from all sustained (i.e. one minute or longer) system interruptions.

If data normalization is required, it is done using the guidelines specified in the report entitled, "Methodology for Determining Reliability Indices for HECO Utilities," dated December 1990. That report indicates that normalization is allowed for "abnormal" situations such as hurricane, tsunami, earthquake, flood, catastrophic equipment failure, and single outages that cascade into a loss of load greater than 10% of the system peak. Such normalizations are made because good engineering design – while accounting for safety, reliability, utility industry standards, and economics – cannot and should not always account for catastrophic events.

The Report also contains a detailed breakdown of interruption causes, which is used to determine steps to be taken to prevent recurrence of such interruptions.

DEFINITION OF TERMS

CUSTOMER INTERRUPTION

One interruption of one customer. Interruptions to customers at their request (e.g. customer maintenance) are not considered.

INTERRUPTION

The loss of service to one or more consumers and is a result of one or more component outages.

INTERRUPTION DURATION

The period from the initiation of an interruption to a consumer until service has been restored to that consumer.

MOMENTARY INTERRUPTION

An interruption that has duration limited to the period required to restore service by automatic or supervisory-controlled switching operations or by manual switching at locations where an operator is immediately available. Such switching operations must be completed in a specific time not to exceed one minute.

SUSTAINED INTERRUPTION

Any interruption not classified as a momentary interruption (i.e. greater than one minute in duration). Only this type of interruption is included in the reliability indices within this report.

RELIABILITY INDICES

Measurements used to indicate electrical service reliability. The indices used in this report conform to Institute of Electrical and Electronics Engineers (IEEE) standards. Four indices that convey a meaningful representation of the level of reliability were selected and are presented in this report. These reliability indices are as follows:

1. AVERAGE SERVICE AVAILABILITY (ASA)

Total customer hours actually served as a percentage of total customer hours possible during the year. This indicates the extent to which electrical service was available to all customers. This index has been commonly referred to as the "Index of Reliability."

2. CUSTOMER AVERAGE INTERRUPTION DURATION INDEX (CAIDI)

The interruption duration per customer interrupted during the year. This index indicates the average duration of an interruption for those customers affected by a sustained interruption.

3. SYSTEM AVERAGE INTERRUPTION DURATION INDEX (SAIDI)

The interruption duration per customer served during the year. This index indicates the average interruption time experienced by all customers serviced on the system.

4. SYSTEM AVERAGE INTERRUPTION FREQUENCY INDEX (SAIFI)

The number of customer interruptions per customer served during the year. This index indicates the average number of sustained interruptions experienced by all customers serviced on the system.

The reliability indices are related to each other in a few ways. For example, the product of CAIDI and SAIFI is SAIDI. SAIDI can then be used to find ASA, since SAIDI represents the time during a period without service, while ASA represents the percent of time during that same period with service. The reliability indices can be thought of more simply as:

1. The percent of time electrical service is available (ASA)
2. The amount of time electrical service is NOT available (SAIDI)
3. How long an interruption lasts (CAIDI)
4. How often an interruption occurs (SAIFI)

Table 1: 2008 – 2012 KIUC RELIABILITY INDICES

	2008	2009	2010	2011	2012
System Peak, MW	74.27	75.41	76.54	72.05	73.06
Customers, #	35,713	36,004	36,113	36,222	36,473
ASA, %	99.983	99.983	99.980	99.976	99.963
SAIFI, #	4.45	6.17	4.76	5.80	4.36
CAIDI, minutes	19.84	14.63	20.74	21.53	44.20
SAIDI, minutes	88.18	90.28	98.72	124.97	192.72

Notes:

- None of the above data has been normalized.
- The major event affecting the 2012 CAIDI occurred on March 28, 2012. An insulator bushing failed on a GSU at the Port Allen Generating Station, causing loss of generation and eventual load shed of all distribution breakers. The outage affected all customers and ranged in duration from 46 minutes to the lengthiest duration of 4 hours and 25 minutes.
- The 2012 SAIDI increase can also be attributed to the event that occurred on March 28, 2012, and is primarily due to the higher CAIDI statistic. However, the 2012 SAIFI is also the lowest of the five-year period, and therefore lessens the impact on the SAIDI statistic for 2012.

Fig. 1: ASA (higher is better)

Figure 1 shows the Average System Availability (ASA) for the past five years. The 2012 ASA of 99.963% is lower than the previous four years of the five-year period and only slightly lower than the five-year average of 99.977%.

Fig. 2: SAIFI (lower is better)

Figure 2 shows the System Average Interruption Frequency Index (SAIFI) for the past five years. The 2012 SAIFI of 4.36 was the best of the five-year period and better than the five-year average of 5.11.

Fig. 3: CAIDI (lower is better)

Figure 3 shows the Customer Average Interruption Duration Index (CAIDI) for the past five years. The 2012 CAIDI of 44.20 was the highest of the five-year period and higher than the five-year average of 24.19.

Fig. 4: SAIDI (lower is better)

Figure 4 shows the System Average Interruption Duration Index (SAIDI) for the past five years. The 2012 SAIDI of 192.72 increased over the previous four years of the five-year period and is higher than the five-year average of 118.97.

2012 KIUC SUSTAINED INTERRUPTION CAUSES

In the following figures and tables, the most recent year's sustained interruption causes are examined. Interruptions can be broken down many ways, but we will focus on two areas: causes by frequency (what caused the most interruptions), and causes by magnitude (what caused the most severe interruptions).

Fig. 5: Sustained Interruptions by Frequency

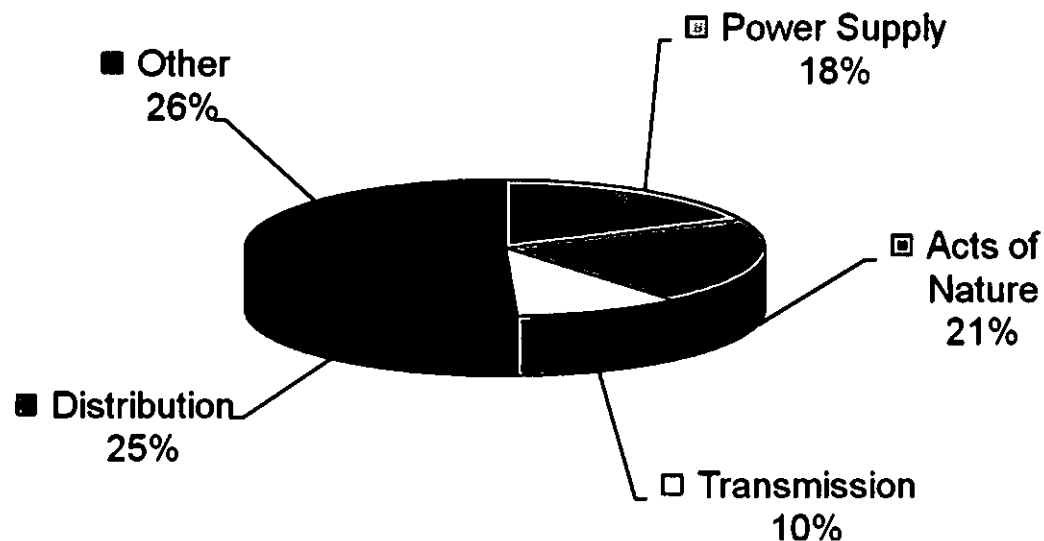

Figure 5 shows the breakdown by frequency. The leading cause of outages was "Other" – persons or equipment not related to or owned by KIUC. Examples include auto accidents that contact utility poles or wires, non-KIUC contractors such as construction crews that dig into underground cables or tree trimmers that contact overhead wires, and trees that contact wires due to overgrowth. A close second was "Distribution" – failure or malfunction of distribution equipment including cables, fuses, insulators, poles, and transformers. The third leading cause of interruptions was "Acts of Nature" – interruptions caused by high winds, floods, storms, etc. The fourth leading cause of interruptions was "Power Supply" confined within KIUC. An example of this is generating unit problems that result in a reduction of output, causing an under frequency load shed; and the fifth (or least) and final cause of interruptions was "Transmission" – failure or malfunction of transmission equipment including insulators, large transformers, lightning arrestors, and switches.

Fig. 6: Sustained Interruptions by Magnitude

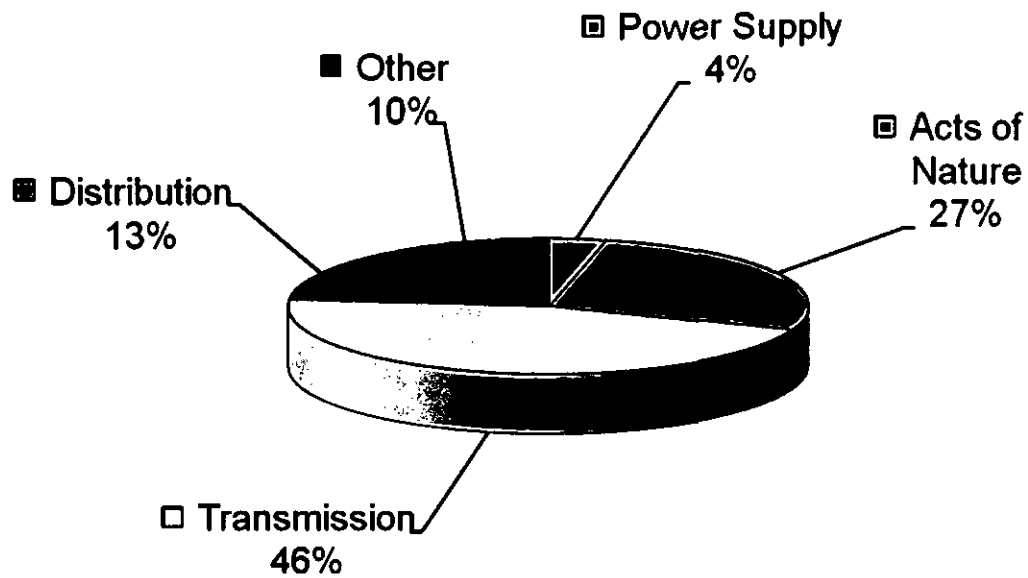

Figure 6 shows the breakdown by magnitude. The same descriptions and examples that were described following Figure 5 apply also for Figure 6. The causes of severe interruptions, in order from most to least, were "Transmission", "Acts of Nature", "Distribution", "Other", and "Power Supply".
