Smart Export Program

Program Features

- PV + Battery: New option for customers to install a rooftop PV system plus a battery energy storage system.
- system will typically charge from the PV system during the daytime (9am 4pm) and power their home in the evening. Option to export energy to the grid during evening, overnight, and early morning (4pm 9am).
- Annual True-Up: Energy export credits will be reconciled on an annual basis. Excess credits expire at the end of the year (with utility cost reduction benefiting all customers).
- Energy Credits: Customers will be credited on monthly bill for electricity sent to the grid during the evening, overnight, and in the early morning (4pm 9am).

Program Capacity:				
HECO: 25 MW	HELCO: 5 MW	MECO: 5 MW		
Approximately 3,500-4,500 customers may enroll in the Smart Export program throughout the HECO service territories.				

Credit Rates and Export Windows for Interim Smart Export Program for the HECO Companies					
12 a.m. – 9 a.m.		9 a.m. – 4 p.m.	4 p.m. – 12 a.m.		
Oʻahu	14.97 ¢/kWh		14.97 ¢/kWh		
Hawaiʻi Island	11.00 ¢/kWh	No credit	11.00 ¢/kWh		
Maui	14.41 ¢/kWh		14.41 ¢/kWh		
Moloka'i	16.64 ¢/kWh		16.64 ¢/kWh		
Lāna'i	20.79 ¢/kWh		20.79 ¢/kWh		

The export credit rates will remain fixed for five (5) years.

Program Requirements

- **Application:** Streamlined interconnection application with the Hawaiian Electric Companies.
- Smart Net Meter: The utility installation of a Smart Net Meter that can measure the bi-directional flow of energy between the Smart Export system and the grid and ensure reliable operation.
- Advanced Inverter: Advanced inverters provide support to the electric grid during different types of grid disturbances. Activating these functions in new Smart Export systems will help maintain a stable and reliable grid.

Customer Grid Supply+ Program (CGS+)

Program Features

- Direct-to-Grid: New option for customers to install a solar PVonly system that exports energy to the electric grid during the
 daytime, but will need to utilize new equipment that allows the
 electric utility to manage power from the system when
 necessary to maintain a stable grid.
- Lower Upfront Investment: Allows for a direct to grid exporting PV system with no energy storage needed.
- Annual True-Up: Energy export credits will be reconciled on an annual basis. Excess credits expire at the end of the year (with utility cost reduction benefiting all customers).
- Energy Credits: Customers credited on monthly bill for electricity sent to the grid.

Program Capacity				
HECO:	HELCO:	MECO:		
35 MW	7 MW	7 MW		

Approximately 5,000-6,000 customers may enroll in the CGS+ program throughout the HECO service territories.

Credit Rates for the CGS+ Program for the HECO Companies				
CGS+ Credit Rate				
10.08 ¢/kWh				
10.55 ¢/kWh				
12.17 ¢/kWh				
16.77 ¢/kWh				
20.80 ¢/kWh				

The export credit rates will remain fixed for five (5) years.

Program Requirements

- Application: Streamlined interconnection application with the Hawaiian Electric Companies.
- Communications and Controllability: Controllability may be provided by a third party that can send data to the utility. The third party will provide a flexible mechanism to reduce CGS+ system output while leaving the customer's load connected when needed to ensure reliable operation of the grid. Alternatively, customers may elect to have HECO install a separate smart production meter that will provide utility data collection and controllability to ensure reliable operation of the grid.
- Advanced Inverter: Provides support to the electric grid during different types of grid disturbances. Activating these functions in new CGS+ systems will help maintain a stable and reliable grid.
